Overview

Slovenia, both as an independent party and a member of the , signed the in 2016. The European Union Nationally Determined Contribution (NDC) towards climate goals includes Slovenia. In the December 2020 update to the European Union NDC, Slovenia committed to the common goals and to reduce its emissions from outside of the by 15% from 2005 levels by 2030. For comparison.

How much energy does Slovenia produce?

Slovenia generated 68.8% of its electricity with zero carbon or carbon neutral sources in 2019, dominated by nuclear power and hydroelectricity. Fossil fuels oil, coal, and natural gas contributed 61% of the total energy supply of Slovenia in 2019.

Does Slovenia use oil to generate electricity?

Following steep declines in use since 1990, Slovenia eliminated the use of oil for generating electricity in 2019. Renewable energy sources other than hydropower (e.g., biofuels, solar PV, waste, and wind) together provided 3.5% of total electricity generation in 2019.

How much gas does Slovenia use a year?

Slovenia uses approximately 0.8 billion cubic meters of gas annually. The government approved a national energy and climate plan in February 2020 to reduce fossil fuel use and greenhouse gas emissions, support renewables, and increase efficiency.

How can Slovenia transition to low-carbon energy sources?

Slovenia is seeking to gradually transition to low-carbon energy sources by focusing on efficient energy consumption, increased use of renewable energy sources, and the development of active electricity-distribution networks.

Where does Slovenia's electricity come from?

Roughly one-third of Slovenia's electricity comes from hydroelectric sources,

one-third from thermal sources, and one-third from nuclear power (with non-hydro renewables constituting two percent of the total). Almost half of Slovenia's total energy consumption consists of imported petroleum purchased on global markets.

Does Slovenia have a natural gas supply contract with Gazprom?

The state-owned gas company Geoplin signed a five-year natural gas supply contract with Gazprom in 2018 to import 600 million cubic meters of Russian natural gas per year. Russia's February 2022 invasion of Ukraine, however, forced Slovenia to reconsider its energy policy and seek alternate sources.

Slovenia goodenough energy

StorEDGE 5.0: 5 MWh Battery Energy Storage System , GoodEnough Energy

StorEDGE 5.0, with 5MWh capacity, is the most compact Energy Storage System, which ensures grid stability and reliability. It helps enhance the efficiency of Renewable Energy sources by making them more reliable and available even when the sun is not shining or the wind is not blowing. StorEDGE 5.0 is a perfect solution to optimize existing energy sources and deliver ...

1 Energy in Slovenia

20 years. In the first two decades of the century, Slovenia imported about half of the energy needs of industrial and household consumers. Since 2017, Slovenia's energy import dependency has exceeded 50%. As far as energy sources such as natural gas and oil are concerned, Slovenia relies exclusively on imports.

SLOVENIA

Slovenia's contribution to the EU energy efficiency target of 32.5% in 2030 is expressed only in primary energy consumption which should not exceed 7.1 Mtoe in 2030. The ambition of the proposed level of the contribution is low compared to what is expected at the EU level to collectively reach the Union's 2030 energy efficient targets.

133rd regular session of the Government of the Republic of Slovenia ...

3 ???· It demonstrates Slovenia's responsible approach to energy efficiency and forward looking development - Slovenia is committed to reducing greenhouse gas (GHG) emissions by at least 55% by 2033 and to accelerating the use of renewable energy sources (RES). The updated NECP is the outcome of an inclusive process involving extensive expert and
