Small area photovoltaic panel power generation

Overview

Small-scale PV systems have less than 1,000 kilowatts of electricity-generation capacity. Most small-scale PV systems are located on buildings and are sometimes called rooftop PV systems.

Small solar panels can generate between 10W and 100W, depending on the size you choose. If you have a 5W compact panel, you can use it to charge small devices like smartphones or an LED bulb.
