Can a solar power generator be used on a roof?

French startup Wind my Roof has developed a small-scale hybrid wind-solar power generator for rooftop applications. The system consists of a 1,500 W wind turbine and two 600 W solar modules. The company said the pairing of the two sources helps maintain a good level of production all year round, while optimizing the use of space on the roof.

Can a wind-solar power generator be used on a rooftop?

From pv magazine France French startup Wind my Roof has developed a small-scale hybrid wind-solar power generator for rooftop applications. The system consists of a 1,500 W wind turbine and two 600 W solar modules.

How much power does a rooftop solar system produce?

Daily output of 5 kWh at mean wind speeds of 5.5 m/s. Starting speed of just 2 m/s breeze. Noiseless: Less than 10% of the sound of the wind itself. RPM control for longer bearing life and safe rooftop installation. Automatically faces any wind direction. Power Generation: Day & Night, Rain & Shine, Summer & Winter.

What is the best solar generator?

Overall, our choice for the top solar generator is the Jackery Portable Power Station Explorer 500, which provides over 500 watt-hours and eight output ports, but is still lightweight enough to bring with you on the go.

What is a solar backup generator?

Solar backup generators are designed to power up when the electrical grid fails and are an efficient alternative to installing a complete system. These generators use several batteries to store energy for high-wattage output. They provide sufficient backup power to turn on lights, televisions, computers, and small to midsize appliances.

How much does a rooftop solar system weigh?

The system requires a rooftop area of 4m<sup>2</sup> and measures 2.1 meters x 1.6 meters x 2 meters. It weighs 300 kg. It has been tested under extreme climatic conditions and its automatic safety systems can provide resistance to up to 180 km per hour of wind and temperatures down to -15 C.
