

European Solar and Energy Storage Solutions

Smart energy group Pitcairn Islands

Overview

Can solar energy replace fossil fuels on Pitcairn Island?

Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95% of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

Are the Pitcairn Islands Green?

Pitcairn Islands, a group of five islands with a total area of 47 km² and which constitute one of the most remote archipelagos in the world, turn to safer, greener energies that best meet the needs of the population. Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy.

Why is smart energy joining Rinnai Australia?

"Welcoming Smart Energy into the Rinnai team aligns perfectly with our vision of delivering innovative and environmentally responsible solutions to Australian households and businesses," said Lucas van Raay, Managing Director of Rinnai Australia.

Smart EV Charging and Energy Management: the Essential Guide

The USEF delivers a single common standard to ensure that smart energy products and implementations easily integrate to create a more sustainable, green energy market. Implementing USEF enables large-scale deployment of smart energy grids. At its most basic level, power flexibility gives users more options about whether and when to use energy.

Bringing Renewable Energy to Pitcairn Island

Following an EU commissioned study in 2017, the EU agreed to fund a Renewable Energy project for Pitcairn to replace fossil fuel with Solar Power under the EDF 11 Regional Envelope and we have been working with our partners in New Caledonia who manage the project on behalf of the four Pacific EU Overseas Territories.
