Overview

Was the Great Pyramid a power plant?

Were the Pyramids Power Plants?

The most commonly accepted theory is that the Great Pyramid at Giza was a tomb for the fourth dynasty Egyptian Pharaoh Khufu or Cheops (two different versions of the same name). However, there are a disturbing number of features about the Great Pyramid that this theory doesn't account for.

Was the Great Pyramid a water processing plant?

Though we normally experience water in its liquid, gaseous, or solid states, they suggest another possible form: electrified or energized water. They go on to say that there is "good evidence that the Great Pyramid was a gigantic water processing plant to create electrified water and other chemical transformations."

How does the Great Pyramid of Giza work?

The Great Pyramid of Giza can collect and concentrate electromagnetic energy in its chambers and at its base, scientists have discovered. The 139m (456ft) construction was built by the ancient Egyptians more than 4,500 years ago and is the oldest of the Seven Wonders of the Ancient World.

Does a resonant pyramid concentrate electromagnetic energy?

Calculations showed that in the resonant state the pyramid can concentrate electromagnetic energy in the pyramid's internal chambers as well as under its base, where the third unfinished chamber is located. These conclusions were derived on the basis of numerical modeling and analytical methods of physics.

How does the Great Pyramid respond to radio waves?

An international research group has applied methods of theoretical physics to investigate the electromagnetic response of the Great Pyramid to radio waves. Scientists predicted that under resonance conditions, the pyramid can concentrate electromagnetic energy in its internal chambers and under the base.
