While solar panels can help heat a house, they are often used as a supplemental heating source rather than the sole means of heating. In colder climates or during times of limited sunlight, backup heating systems may be necessary to ensure adequate warmth.

How does solar heating work?

Similar to traditional panels, solar heating uses sunlight to generate energy for your home. However, solar heating transforms this energy into heat instead of electricity. We'll take a closer look at the types of solar heating technology available below. Solar thermal energy systems use two types of heating technology:.

Can a solar space heater reduce heating costs?

Solar space heaters can reduce heating costs by up to 70 percent. However, most building codes require a backup heating system, so your solar space heaters should be integrated with an existing heating system. One specific way to use solar water heating is for pools - solar pool heating systems are a great way to harness the sun's thermal energy.
