Solar power belt treadmill

Overview

How does a Verde treadmill work?

The Verde treadmill generates up to 200 watts of electricity per hour through a micro-inverter built inside the machine. These tiny devices are also used in solar panels and wind turbines to convert the harnessed direct current (DC) power into an alternating current (AC) that can be sent to the grid.

Does a sportsart Verde treadmill save energy?

Danielle Zickl for Runner's World and Bicycling. The SportsArt Verde Treadmill generates electricity and saves energy as you work out. Plus, it offers benefits that may help boost your running performance.

How much electricity does an eco treadmill use?

One eco treadmill uses a USB port to power a small device like a smartphone. But the Verde is the first to generate up to 200 watt-hours of “utility-grade” electricity. The Verde G690 non-motorized treadmill uses a low-friction belt with slow incline and smart braking to start and stop.

How much electricity does a treadmill use?

Anything plugged into the gym’s grid can use the harnessed electricity. And while everyone’s workouts are different, the max amount of electricity you can generate on the treadmill is 200 watts per hour—or the equivalent wattage of the average refrigerator, Mejia said.

Is a sportsart treadmill eco-friendly?

And while SportsArt is the first company to create this type of treadmill that harnesses energy through human power, the running community is beginning to look toward more sustainable options, like limiting plastic cups and bottles at races or making eco-friendly running gear.

Are Verde treadmills hitting gyms worldwide?

Now the Verde treadmills are hitting gyms worldwide. Sacramento Eco Fitness added the Verde to its roster of SportsArt equipment in April, while the Eco Gym in Brighton, U.K., ordered some this September.

Solar power belt treadmill
