# Solar power generation directly used in industry

## Overview

---

Solar-thermal power can replace fossil fuels in a wide variety of industrial applications, including petroleum refining, chemical production, iron and steel, cement, and the food and beverage industry.

Solar-thermal power can replace fossil fuels in a wide variety of industrial applications, including petroleum refining, chemical production, iron and steel, cement, and the food and beverage industry.

Solar energy can be used to generate heat for a wide variety of industrial applications, including water desalination, enhanced oil recovery, food processing, chemical production, and mineral processing.

When the sun is shining, PV systems can generate electricity to directly power devices such as water pumps or supply electric power grids.
