# Solar power generation effect at night

## Overview

However, at night, there is no sunlight to fuel this process. As a result, solar panels are unable to generate electricity during nighttime hours.

However, at night, there is no sunlight to fuel this process. As a result, solar panels are unable to generate electricity during nighttime hours.

Solar panels can traditionally only produce power when the sun shines, but new developments are changing that. Scientists have developed solar panels that can work in the dark and be powered by rain. These innovations could transform solar into a 24-hour power source, helping with the world's transition to net-zero emissions.

These cells are driven by radiative cooling, whereby at night they release radiative heat built up over the day and generate electricity.
