# Solar power station closures

## Overview

---

Why is a solar power plant closing in Sheboygan?

Utilities say import tariffs on solar panels imposed by U.S. Commerce Department make it hard to keep up with robust power demand. In addition to the closure delay of its 400 megawatt (MW) Edgewater plant in Sheboygan, Alliant's 1.1 gigawatt Columbia Energy Center in Portage will close by June 2026, a delay of about 18 months.

What does the closure of coal-fired power plants mean?

The closure of the coal-fired units means a permanent shift in the mix of fuels used to power the U.S. electrical grid, since no new coal plants are being built to replace them.

Are coal plant closures a good idea this year?

Moreover, analysts generally consider EIA data to be relatively conservative, so the plant closures and associated benefits could potentially be even greater this year, especially now that 99 percent of existing US coal plants are more expensive to run than building new wind and solar generating capacity, according to a recent analysis .

Why are so many coal plants shutting down?

Nearly 360 U.S. coal plants have shut or plan to shut in recent years, compared with about 170 plants that remain active, according to the organization. Rather, Bender said, the delays serve a "warning sign of the failure to plan for the kind of clean energy growth that is needed."

Will Mineral Basin solar power sit on a shuttered Homer City coal plant?

Correction: I previously stated in the opening sentence that Mineral Basin Solar Power will sit on 2,700 acres of the shuttered Homer City coal plant's land. That is incorrect. Clearfield County is in the vicinity of the Homer City coal plant. The energy Mineral Basin supplies will replace the lost energy from

the Homer City coal plant.

What happens if the coal industry closes in 2023?

It is likely to result in significant mine closures, layoffs, and falling tax and royalty payments in coal-producing states. From 2023 through the end of 2030, more than 80GW of coal generation is currently set to close, with about 10.5GW of that expected to be converted to run exclusively on gas.

## Solar power station closures

---

### Vistra Energy announces closures of Baldwin and ...

The announcement includes closures of Vistra-owned Baldwin Power Plant in Randolph County and Joppa Power Plant in Massac County. Vistra Energy merged with Dynegy back in 2018, taking ownership of

### Hunter Valley's Liddell Power Station closes, marking ...

The last running turbine at the Liddell Power Station has powered down, marking the end of a 52-year legacy of generating electricity in the NSW Hunter Valley. solar, wind and also looking at

### Authorities confirm closure of Homer City power ...

Indiana County, PA (WJAC) -- Officials say the largest coal-fired power plant in Pennsylvania plans to shut down later this year. 6 News spoke to authorities about the potential effects this

### Closures of coal-fired power stations in Australia: Local ...

The largest was the Hazelwood power station

(1,760 MW) in the Latrobe Valley, Victoria, which ceased operations in March 2017. Many of Australia's remaining coal-fired power stations are ...

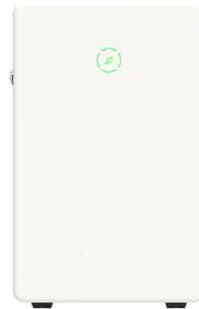

## Coal closures, battery storage, solar generation: The ...

Left unsaid by DTE, but another major benefit, the early closure will remove the third-largest emitter of carbon dioxide (CO<sub>2</sub>) from the U.S. electric grid. The plant emitted 16.29 million tons of CO<sub>2</sub> in 2022, behind only ...

## Farewell Liddell: what to expect when one of Australia's ...

...

After more than five decades, the last operating units of the Liddell coal-fired power station will close this month. The station's owner, AGL, is Australia's largest carbon polluter. Liddell's closure will reduce the company's emissions ...

## Vistra Energy adds Baldwin, Joppa coal-fired power plants to closures ...

Additional closures raise projected job losses to 545. By CARL GREEN Illinois Correspondent. THE COAL-FIRED power plant in Baldwin is set to close by the end of 2027 the company ...

## Closures of coal-fired power stations in Australia: local ...

March 2017. No new coal-fired power station has opened since Bluewaters 2 power station in Western Australia (WA) in 2010. Many of Australia's remaining coal-fired power stations are ...

## Delayed U.S. coal plant closures are bumps in the road, ...

At PNM, the New Mexico utility revised plans to close its San Juan coal-fired generating station after pandemic-induced delays slowed the completion of new solar projects being built to replace the 847MW of capacity ...

## Good News--and Bad--about Fossil Fuel Power Plants ...

The addition of newer, cleaner resources like solar power to our electricity grid will happen in tandem with the planned retirement (or permanent closure) of older and dirtier resources such as coal- and gas-fired power ...

## NV Energy IRP Would Replace Nevada's Last Coal ...

Nevada is set to become the first Southwestern state to go coal-free with the planned closure of the North Valmy Generating Station in 2025. NV Energy, the plant's operator and Nevada's sole investor-owned electric utility, ...

## Coal and natural gas plants will account for 98% of U.S.

The oldest four of the plant's seven coal-fired units were retired in 2020; the last three units will be shut down this year, along with the plant's five petroleum-fired units (13 MW of combined capacity). Pleasants Power Station ...
