When thinking of generating solar energy on buildings, most people think of rooftop solar panels—the rectangular, glass modules placed neatly on top of people’s homes. But solar technologies include much more than just rooftop panels, and building-integrated photovoltaics, also known as BIPV, takes the panel off the roof and, for example .

Before you install solar panels on your roof, find answers to these 8 questions to make sure solar will save you money and energy.

We explore how residential rooftop solar impacts EB (electric and non-electric) at the household level across the U.S. This paper also leverages empirical data wherever possible.

Now, an international team of researchers has determined that if every available rooftop was equipped with solar panels, they could generate enough electricity to power the world. At least. Are rooftop solar panels eco-friendly?

Installing rooftop solar panels allows consumers to directly benefit from the sun’s green energy, which benefits the environment by reducing greenhouse gas emissions. The development and manufacturing of solar panels can be managed in eco-friendly ways to benefit the environment.

What is a rooftop solar energy system?

Rooftop solar energy systems produce power locally, keeping power production and the economic opportunities that solar energy generates within the community. SETO funds research that helps maximize the value of rooftop solar systems for their owners.

Is rooftop solar more affordable?

Rooftop solar has never been more affordable for home owners, business owners, and their communities. The shift toward clean, reliable, affordable electricity in the United States is most visible in the rapid proliferation of solar panels mounted on the roofs of homes and businesses.

Does rooftop solar reduce energy burden?

Pairing an empirical household-level dataset spanning United States geographies together with modeled hourly energy demand curves, we show that rooftop solar reduces energy burden across a majority of adopters during our study period from a median of 3.3% to 2.6%.

Can you put solar panels on a old roof?

If your roof is old, the answer is no—at least not until you replace it. Asphalt shingles that are 10 years old or more should be replaced before adding a solar array on top, says Ana Almerini, a spokesperson for SolarReviews. New solar panels are warrantied to last, on average, 25 years, while most roofs are warrantied for 30 years or less.

Why should you choose rooftop solar power?

Individuals and businesses have been attracted not just to the environmental benefits of solar power, but also to the ability to generate their own power and to the fixed and competitive price of electricity that these systems provide. Rooftop solar is increasingly cost-effective for home owners, business owners, and their communities.
