Overview

Can a solar pool heater and pump power a pool?

In general, we'd recommend pairing an efficient electric pool heater and pump with your solar PV. That way, you can power everything with solar and will likely have the best savings. The added electrical needs from the electric pool heater and pump will add only 3-5 solar panels to the system, depending on panel wattage.

Are solar pool heaters a good idea?

Depending on your pool and location, solar heaters can be a cleaner and cheaper way to keep your pool heated and ready for use. In fact, in most climates, solar pool heaters have lower annual operating costs and are more efficient than traditional heaters. [What is a Solar Pool Heater & How Does It Work?](#)

.

Can solar panels heat a pool?

Solar panels are versatile and work with different pool sizes and types, so whether your pool is small, large, above, or in-ground, you have the option to heat your pool with solar energy. [Pool need maintenance?](#)

.

Do I need a pool pump for a solar system?

You'll also want a properly sized pool pump for a solar system. If you're

replacing a conventional pool heating system with a solar system, you may need a pump larger than your current one or a separate, smaller pump to move the pool's water to and through the collectors.

What type of solar panels do you need for a pool?

Flat plate: This type represents the most common solar-heating option for pools. A flat-plate collector consists of a large flat sheet of black polypropylene or hard plastic that absorbs the sun's heat. The panels are typically mounted to the roof of a home or a rack on the ground.

How does solar energy work in a swimming pool?

Energy from the sunlight shining on a solar panel is absorbed by the many photovoltaic cells (or PV cells) in the panel. This energy creates electrical charges that cause electricity to flow. Solar panels allow particles of light to knock electrons free from atoms to generate this flow of electricity. Why Heat a Swimming Pool with Solar Energy?
