Overview

Is Somalia ready for oil & gas exploration?

Somalia's first offshore licensing round commenced in August 2020, opening up one of the final frontier regions of the world for oil and gas exploration. Offshore Somalia is one of the few remaining frontier areas in the world. Only one exploration well, Meregh-1, has been drilled along the country's entire 1,200 km-long margin.

Are there oil-prone prospects offshore the Somalian margin?

One of the most exciting aspects of the seismic interpretation is that, unlike much of East Africa where gas discoveries are the norm, TGS believe that there is a strong possibility of oil-prone prospects offshore the whole length of the Somalian margin.

Is there a potential for hydrocarbon exploration in Somalia?

New seismic data studies from Spectrum indicate high potential for hydrocarbon exploration in offshore Somalia, with excellent opportunities on offer in the region's 1st Licencing Round. By Karyna Rodriguez, Neil Hodgson and David Eastwell, Spectrum Geo; Abdulkadir Abiikar Hussein, Mopmr, Federal Government of Somalia.

Is offshore Somalia still a frontier?

Offshore Somalia remains one of the last truly frontier passive margins in the world, with only two exploration wells offshore along the 1,000 km-long margin.

What is the first offshore licensing round in Somalia?

On 4 August 2020, the Somali Petroleum Authority announced the opening of the country's first-ever offshore licensing round. This licensing round features up to seven blocks that are up for the bidding process which are estimated to be among the most promising areas for petroleum exploration and production

in Somalia.

Is Somalia a hot-spot for black oil?

Now, after ten years of relative political peace, Somalia is set to emerge as the new hot-spot for the industry, offering not only vast reserves to match the Rovuma Basin of Mozambique, but also the most elusive of prizes in East Africa - black oil. North-west to south-east seismic line from the northern Juba-Lamu Basin. Line length = 170km
