South Korea omni energy solutions

Overview

Can South Korea achieve net-zero emissions?

Right now, no power plants in South Korea are fitted with carbon capture technology. A multi-trillion-dollar opportunity The journey to net-zero emissions hinges on \$2.7 trillion of investment and spending between now and 2050 to decarbonize South Korea's energy system, 37% higher than in an economics-led transition.

Will Korea's energy transition go beyond the power sector?

The focus of Korea's energy transition must go beyond the power sector to target emissions from industry and transport, the IEA policy review says. The industrial sector is emissions-intensive and accounts for over half of Korea's final energy consumption despite the notable improvement in energy efficiency over the last decade.

How much did South Korea invest in the energy transition?

South Korea's investment in the energy transition came in at \$25 billion last year. A clear and consistent policy framework is necessary to boost investor confidence and match the spending needs of a net-zero future.
