

## European Solar and Energy Storage Solutions

# Split solar light with power storage

To Strive forward No Energy Waste

- ✓ All in one
- ✓ 100~215kWh  
High-capacity
- ✓ Intelligent  
Integration

## Overview

---

What are split solar street lights?

What are split solar street lights, and their pros and cons?

Also called "separated solar street lights" and regarded as the first-generation of solar-powered street lights, these lights generally have a solar panel installed on the top of the light pole and a solar battery hung at the lower part of the pole or buried underground.

How do solar street lights work?

Also called "separated solar street lights" and regarded as the first-generation of solar-powered street lights, these lights generally have a solar panel installed on the top of the light pole and a solar battery hung at the lower part of the pole or buried underground. Simply put, all components of the light are distributed separately.

What are the different types of solar street lights?

No matter which type you are considering, all types of solar street lights consist of a solar panel, lighting module and fixture, rechargeable battery, and a pole. Some premium street light products also integrate MPPT charge controller, advanced Battery Management System (BMS) and/or microwave sensor for a robust and extensive application.

What is a rechargeable solar battery?

The rechargeable solar battery has higher efficiency, a longer lifespan, and requires less frequent maintenance. The battery is hard to be taken off as well as damaged by flood and heavy moisture, as compared to the hung or buried counterpart on split street lights. More aesthetically appealing than the traditional split street light design.

Why should you choose a rechargeable solar battery for your street light?

Have more capacity to power the street light due to the improved energy density of lithium-ion or LiFePO4 batteries—when there's no power generation. The rechargeable solar battery has higher efficiency, a longer lifespan, and requires less frequent maintenance.

Are all-in-one solar street lights a good idea?

All-in-one solar street lights seem perfect; they have some downsides project managers should overcome. The first one is the price. They have a higher price tag than the all-in-two and traditional split types of street lights, which may cause stress to project managers if they have a tight budget.
