Syria electricity back up

Overview

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

What happened to Syria's electricity sector in 2021?

In 2021, Syria's Ministry of Electricity estimated total losses to the electricity sector at USD 2.4 billion due to infrastructural damage and acute shortages of fuel and water needed to power Syria's thermal and hydroelectric infrastructure.

Will we build a new Syria?

We are going to build a new Syria. We will bring back all Syrians and make sure it's only one country, only one community, and that Syrians are making the decisions in this country." Syrians attend Friday prayers outside the Umayyad Mosque, which was built in the early 700s and is the largest in Damascus.

Why is energy demand increasing in Syria?

Energy demand in Syria has been increasing at a rate of roughly 7.5% per year due to the expansion of the industrial and service sectors, the spread of energy-intensive home appliances, and state policies that encouraged wasteful energy practices, such as high subsidies and low tariffs.

How did Syria's conflict affect the electricity system?

The conflict in Syria led to increasingly frequent blackouts across the country due to damage to the electricity system. This resulted in disruptions to all forms of economic activity and reports of electrical fires caused by problems with the electrical grid.

Why are Syrians rejoicing in the streets?

Long-suffering Syrians have been rejoicing in the streets after one of the world's most brutal dictatorships suddenly crumbled in a few short weeks. For half a century, the Assad family ruled over Syria with an iron fist, with long-documented reports of mass incarceration torture, extra-judicial killings and atrocities against their own people.
