The biggest challenge however facing the solar energy future is its unavailability all-round the year, coupled with its high capital cost and scarcity of the materials for PV cells. Are there downsides to solar energy?

There are some downsides to solar energy that demand your attention before considering them as a replacement for the currently used energy sources today. First and foremost, solar energy is produced from nature and it depends on many factors that are not consistent and reliable.

Are solar energy systems bad for the environment?

Solar energy systems have been grabbing most attention among all the other renewable energy systems throughout the last decade. However, even renewable energies can have some adverse environmental repercussions; therefore, further attention and proper precautional procedures should be given.

What are the problems with solar power?

1. Intermittency issues can disrupt the advantages of solar power. One of the most significant issues with solar energy is that the technology can only generate power when the sun shines. If there is an overcast day with a high gloom index or nighttime hours arrive, then the resource receives an interruption of its supply.

What are the environmental impacts of solar power?

The potential environmental impacts associated with solar power—land use and habitat loss, water use, and the use of hazardous materials in manufacturing—can vary greatly depending on the technology, which includes two broad categories: photovoltaic (PV) solar cells or concentrating solar thermal plants (CSP).

Do solar PV systems impact the environment?

The previous literature review reveals a well-established environmental impacts assessment of the solar PV systems is crucial. Currently, there is a gap in the literature regarding the impact of different PV system components on the environment.

Is solar energy inefficient and unreliable?

For a country that already uses too much water for farmers, it is nearly impossible to use that much amount of water to produce solar energy. Considering the above-mentioned disadvantages of solar energy, it is safe to say solar energy is inefficient and unreliable.
