

## European Solar and Energy Storage Solutions

# The proportion of wind power generation increased in June

## Overview

---

In June 2022, the United States had 137.6 GW of wind capacity, and 10% (14.3 GW) of that capacity was installed between June 2021 and June 2022. Based on planned additions reported to us by power plant owners and developers, another 7.0 GW of wind and 13.0 GW of solar capacity will come online by the end of the year.

In June 2022, the United States had 137.6 GW of wind capacity, and 10% (14.3 GW) of that capacity was installed between June 2021 and June 2022. Based on planned additions reported to us by power plant owners and developers, another 7.0 GW of wind and 13.0 GW of solar capacity will come online by the end of the year.

“Data Page: Share of electricity generated by wind power”, part of the following publication: Hannah Ritchie, Pablo Rosado and Max Roser (2023) - “Energy”. Data adapted from Ember, Energy Institute.

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze solar and wind.

Annual percentage change in wind power consumption. Figures are based on gross generation and do not account for cross-border electricity supply. Source. Energy Institute - Statistical Review of World Energy (2024) - with major processing by Our World in Data. Last updated.

Energy output is a function of power (installed capacity) multiplied by the time of generation. Energy generation is therefore a function of how much wind capacity is installed. This interactive chart shows installed wind capacity - including both onshore and offshore - across the world. Will solar and wind energy lead the growth in US power generation?

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.

How did wind power grow in 2022?

In 2022 wind electricity generation increased by a record 265 TWh (up 14%), reaching more than 2 100 TWh. This was the second highest growth among all renewable power technologies, behind solar PV.

How has wind power changed over the past 30 years?

Wind electricity generation has grown significantly in the past 30 years. Advances in wind-energy technology have decreased the cost of wind electricity generation. Government requirements and financial incentives for renewable energy in the United States and in other countries have contributed to growth in wind power.

What percentage of electricity is generated by wind turbines?

In 2022, wind turbines were the source of about 10.3% of total U.S. utility-scale electricity generation. Utility scale includes facilities with at least one megawatt (1,000 kilowatts) of electricity generation capacity. Last updated: December 27, 2023, with data from the Electric Power Monthly, December 2023.

How much wind & solar power will be installed in 2022?

In June 2022, the United States had 137.6 GW of wind capacity, and 10% (14.3 GW) of that capacity was installed between June 2021 and June 2022. Based on planned additions reported to us by power plant owners and developers, another 7.0 GW of wind and 13.0 GW of solar capacity will come online by the end of the year.

Which countries generate the most wind energy in 2022?

Wind remains the leading non-hydro renewable technology, generating over 2 100 TWh in 2022, more than all the others combined. China was responsible for almost 40% of wind generation growth in 2022, followed by the United States at 22%.

## The proportion of wind power generation increased in June

---

### Renewable power on course to shatter more records as ...

With the global energy crisis as a catalyst, solar PV and wind are set to lead the largest annual increase in new renewable capacity ever, new IEA report shows. Global additions of renewable power capacity are expected to ...

### 2021 Share of Electricity from Renewable Energy ...

In the Tohoku area, wind power generation peaked at 17.2% of the hourly value (April 19, 2021 at 0:00 a.m.); in the Chugoku area, where the percentage of renewables in the hourly generation exceeded 100% of ...

### In the first half of 2022, 24% of U.S. electricity ...

In June 2022, the United States had 137.6 GW of wind capacity, and 10% (14.3 GW) of that capacity was installed between June 2021 and June 2022. Based on planned additions reported to us by power plant owners and ...

### A Decade of Growth in Solar and Wind Power: Trends ...

Solar and wind energy will lead the growth in

U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze solar and wind

**INTEGRATED DESIGN**  
EASY TO TRANSPORT AND INSTALL,  
FLEXIBLE DEPLOYMENT

## Short-Term Energy Outlook

We expect natural gas and solar power to be the largest sources of growth in U.S. electricity generation in 2024. Natural gas use for power generation has risen this year as a result of relatively low fuel prices, while ...

## Renewable Energy

The amount of electricity generated by wind increased by 265 TWh in 2022 (up 14%), the second largest growth of all power generation technologies. Wind remains the leading non-hydro renewable technology, generating over 210 ...

## 2023 Share of Electricity from Renewable Energy ...

June 10, 2024. Summary. and geothermal power was up slightly from the previous year at 0.28%. Hydroelectric power generation increased 0.4 percentage points from the previous year to 7.5%. On the other hand, the share of VRE ...

## Analysis of Performance Deviation of Wind Power Enterprises in ...

The proportion of abandoned wind power dropped rapidly to 1%. Xinjiang is also a region showing a serious problem with abandoned wind power. The proportion of abandoned wind power ...

## Annual percentage change in wind energy generation

Annual percentage change in wind power consumption. Figures are based on gross generation and do not account for cross-border electricity supply. Source. Energy Institute - Statistical Review of World Energy (2024) - ...

## (PDF) Research on the influence of a high proportion of wind power

(A) Simplified model of power grid without wind turbine. (B) Simplified model of power grid replaced by wind turbines before fault. (C) Simplified model of power grid without ...
