The roof is drilled for photovoltaic panel installation

Overview

The process of installing solar panels involves drilling holes in your roof to mount the panels in place. However, solar installers will then patch the holes with weather-resistant materials.

The process of installing solar panels involves drilling holes in your roof to mount the panels in place. However, solar installers will then patch the holes with weather-resistant materials.

During installation, workers will drill holes in your roof to secure the racking which will hold your panels.
