The upper limit of photovoltaic panel size

Overview

The 120% rule is a common guideline followed when integrating solar power systems, which sets the upper limit for the solar system size permitted at 120% of the main breaker's rating.

The 120% rule is a common guideline followed when integrating solar power systems, which sets the upper limit for the solar system size permitted at 120% of the main breaker's rating.

As a general rule, 5kW tends to be the upper system size limit for single-phase connections, but some networks allow up to 10kW. There are lots of variations to this theme, however.
