Total energy company Ecuador

Overview

What is the main source of energy in Ecuador?

Petroleum and other liquids continue to be Ecuador's primary source of energy; crude oil accounted for 63.4% of total energy consumption in 2021. The country has significant oil reserves and is one of South America's top oil producers.

How much energy does Ecuador use?

In 2021, the country consumed 21 thousand short tons,¹⁵ which it imported primarily from the United States, followed by Peru. Ecuador relied heavily on fossil fuel (which include oil, natural gas, and coal) production for power generation a decade ago, with fossil fuel-powered plants accounting for about 43% of total energy production in 2011.

Does Ecuador have a natural gas market?

Ecuador's natural gas market is less developed than its oil sector; it has a 0.9% share of total energy production and 1.7% share of energy consumption (Figure 1). Natural gas in Ecuador is mostly used by the industry sector¹.

Which oil company produces the most oil in Ecuador?

Petroecuador is the country's top oil producer, accounting for an estimated 80% of Ecuador's output via its subsidiary Petroamazonas. Petroecuador controls the country's crude oil processing capacity through Petroindustrial, its refining subsidiary.

What is total Eren doing in Ecuador?

In Ecuador, we are active in the solar market and the retail sector. In Ecuador, as part of a joint venture, our affiliate Total Eren is developing and financing a hybrid renewable energy microgrid project (solar/battery/transmission) in the Galapagos Islands. In Ecuador, we retail specialty and petrochemical products to our business customers.

How much natural gas does Ecuador produce a day?

In 2018, Ecuador was producing 517,000 bbl/day. Natural gas continues to be important for maintaining a reliable and flexible power grid and is set to grow despite Ecuador's lack of infrastructure for capture and marketing of its own natural gas.
