Trojan solar batteries San Marino

Overview

Remote home sites with no access to electricity often depend on off-grid renewable energy systems. Trojan's deep cycle batteries can provide a reliable, cost-effective power source to satisfy the energy needs of these homes.

Increasing energy consumption around the world places a tremendous demand on existing power grids, with frequent power outages becoming more common. As a result, the demand for inverter battery backup systems is.

The use of solar and wind power home systems is rapidly expanding, as renewable energy become more affordable and available worldwide. Families with no access or limited access to electricity can use.

Micro-grid systems powered by solar, wind and hybrid renewable energy sources generate consistent electricity in remote areas where grid expansion isn't an option. The key to a successful micro-grid is a reliable energy storage.

With 80 percent of the world's population living in remote areas around the world, local schools, hospitals, and other community buildings in these regions often have no access to electricity. Off-grid battery-based renewable.
