This guide assists local government officials and stakeholders in boosting solar deployment with approaches to reduce market barriers that have been field tested in cities and counties around the country.

This tool is used as an informational resource to define various federal, state, local, and utility policies, and to describe how and where these policies are structured and implemented. DSIRE provides specific information on policies that directly impact solar development in your state.

Costs for all components of solar photovoltaic (PV) systems—including cells, modules (also referred to as panels), inverters, and other related equipment—have generally declined in recent years. Assessing solar energy costs for consumers is challenging because there are many local factors to consider.

the mounted aluminum framed PV panels (i.e., other PV technologies or ground mount systems), EPA recommends that an installer certified by the North American Board of Certified Energy Practitioners (NABCEP) determine the ideal system for the project's unique building environment. Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a “post” and rail mounting system, the most common in the industry today, will

be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

Should a community solar program include workforce development and training requirements?

Include workforce development and training requirements in state or local program rules. State or local community solar programs can include training and other workforce development requirements in their project solicitations.

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement, builders should minimally specify an area of 50 square feet in order to operate the smallest grid-tied solar PV inverters on the market.

What should be included in a solar PV system diagram?

The diagram should have sufficient detail to clearly identify: Figure 10: 70-Amp Double Pole Breaker. Figure 11: Site/System Diagram. The diagram should include: array breaker for use by the location, size, orientation, conduit size and location and balance of system solar PV system. component locations.

What are the requirements for deploying a PV system?

associated with deploying PV. Licensing standards are important aspects of PV installations. The level of training required, the allowable ratio of licensed electrician to apprentice, and the defin.

Are solar PV systems eligible for a tax credit?

Solar PV systems installed in 2020 and 2021 are eligible for a 26% tax credit. In August 2022, Congress passed an extension of the ITC, raising it to 30% for the installation of which was between 2022-2032. (Systems installed on or before December 31, 2019 were also eligible for a 30% tax credit.)
