

## European Solar and Energy Storage Solutions

# Yushu New Energy Microgrid

### DISTRIBUTED PV GENERATION + ESS

## Overview

---

Does China have a microgrid?

China has built a series of this kind of microgrid in Tibet, Qinghai, Xinjiang, and Inner Mongolia, which has guaranteed local power efficiency. Similar to the remote countryside, there are challenges in regard to installing power lines on the islands.

Are medium-sized wind and PV power suitable for microgrids?

Medium-sized wind and PV power are economically unsuitable for using multi-energy complementation and transmission methods and are technically unsuitable for microgrids. Methods with direct connections to the power grid are reasonable. This situation requires large peak shaving capacities and advanced operation skills.

Does China have a power grid peak shaving operation?

In general, each province of China has wind and PV power transmitting to the local grid at different scales . According to the load and energy resource distribution characteristics, energy consumption has local distinctiveness. The overall energy transmission of the power grid peak shaving operation consumption mode is shown in Fig. 6. Fig. 6.

Which energy consumption modes are suitable for Microgrid integration?

Practical variable energy consumption modes are outlined and analyzed. Small-scale distributed wind and PV power is suitable for microgrid integration. Medium-sized wind and PV power consumed through the main grid is reasonable. Large-scale wind and PV can be combined and transmitted with hydro or thermal power.

What is distributed energy microgrid absorption mode?

3. Distributed energy microgrid absorption mode Early wind and solar energy were often developed in the form of single or small scale distributed solar-cell

panels or wind-driven generators, called distributed generation.

How many MW of solar power does Zhangjiakou have?

This project is located in Zhangjiakou, which is one of the eight national 10 GW level wind power basins, and sources a large amount of solar energy. The project consists of 500 MW wind power, 100 MW PV power, and 70 MW storage capacities.
